

Now recruiting dogs for hemangiosarcoma study

Iowa State University researchers are conducting a new clinical study for dogs with hemangiosarcoma. We will be assessing an immunotherapy (Immunocidin) in combination with doxorubicin (vs. doxorubicin alone).

To be enrolled, dogs must have:

1. Confirmed splenic hemangiosarcoma by histopathology
2. Splenic hemangiosarcoma stage I or II and have undergone splenectomy
3. Have an ECOG performance score of 0 to 1

Dogs cannot have:

1. Received any steroids or any chemotherapy treatment before enrollment
2. Concurrent malignancies other than hemangiosarcoma
3. Serious systemic disorders
