WHAT MAKES SAGE DIFFERENT?

SAGE was founded in 1992 and has grown into one of the largest specialty practices in the country. Our team approach, expertise, and facilities are what set SAGE apart.

Our team approach: A dedicated group of specialists and nursing staff work together to ensure a complete veterinary approach. And, clients have ongoing access to the specialists and staff that have treated their pet at SAGE. We are here for you around the clock.

Our expertise and facilities: SAGE has one of the best veterinary teams in the country. Our doctors have studied and trained with world-class veterinary programs, and each brings a desire to continually expand their knowledge and practice exemplary and compassionate veterinary care.

SAGE owns and operates hospitals in Concord, Dublin, Campbell and Redwood City. We have designed each hospital with our patients’ and clients’ comfort in mind. Each hospital offers the latest in veterinary surgical and diagnostic tools. In our operating rooms, we have equipment to perform all orthopedic surgeries, neurological surgeries including brain surgery, chest and abdominal surgery, reconstructive surgery, oncologic (cancer) surgery, and minimally invasive surgery.

We provide comprehensive specialized care for your pet through the integration of science and compassion.

CAMPBELL
907 Dell Avenue
Phone: (408) 343-7243
Fax: (408) 385-3680

CONCORD
1410 Monument Boulevard
Phone: (925) 627-7243
Fax: (925) 771-1181

DUBLIN
7121 Amador Plaza Road
Phone: (925) 574-7243
Fax: (925) 771-3043

REDWOOD CITY
934 Charter Street
Phone: (650) 417-7243
Fax: (650) 344-4714

SAGE Centers’ internists use on-site equipment to diagnose, treat and manage their patients’ care. There is no need to move or transport patients to other facilities. This is important to patients’ comfort and well-being.

www.sagecenters.com
Veterinary medicine has become specialized, just as human care has. Specialty care is the practice of providing advanced services and procedures to diagnose, treat and manage a pet’s health issues.

Clients bring their pets to our Internal Medicine specialists for many reasons. In some cases, their pet is sick and they don’t know why—they are seeking a diagnosis and next steps. In other cases, a primary care veterinarian has found issues that need specialized care and they refer pets to SAGE.

SAGE internists are well-known in the community for providing top-quality, advanced care. These board-certified specialists bring the highest level of training to their work, and have completed focused coursework, an internship, and a 2-3 year residency program, in addition to their veterinary degree requirements.

Our Partnership with Primary Care Veterinarians
SAGE Internal Medicine specialists have worked side-by-side with Bay Area primary care veterinarians for decades. Communication is a big part of how we work with everyone involved in an animal’s care.

Our specialists send digital medical records and homecare instructions to a pet’s primary care veterinarian after each visit or re-check appointment.

And, our team of veterinary technicians and administrators ensures seamless communication and handoff of information between medical staff, whether at SAGE or another practice.

WHAT WE DO
Internists use their breadth of experience and a range of diagnostic techniques to determine the cause of a pet’s illness. Common conditions treated by these veterinarians include:

- Gastrointestinal and digestive disorders (esophageal, stomach and intestines)
- Liver and pancreatic diseases
- Endocrine or hormone diseases, including thyroid disorders, Cushing’s Syndrome, diabetes, and Addison’s disease
- Urinary tract diseases
- Kidney disease
- Autoimmune diseases
- Respiratory diseases (nose, airway and lung)

SAGE internal medicine specialists work closely with primary care veterinarians across the Bay Area.

WHAT IS SPECIALTY CARE?

HOW WE WORK

We provide advanced and therapeutic services using state-of-the-art equipment. The most common Internal Medicine procedures include:

**Ultrasound**
Ultrasound uses sound waves to produce images of organs and structures in the body. This tool is very useful for evaluating the size and appearance of organs, as well as assessing the presence of masses or fluid. Specialists also use ultrasound to get samples for biopsies or fine-needle aspirations.

**Rhinocopy and Bronchoscopy**
These procedures evaluate the nasal passages, mouth, and airway, and are commonly performed to remove foreign bodies or to obtain tissues samples to aid in the diagnosis of respiratory diseases.

**Upper and Lower Endoscopy**
Endoscopy evaluates the stomach, small intestine and large intestine. Specialists use a flexible instrument called an endoscope with a lighted, miniature camera to evaluate the body’s internal structures. This is a minimally invasive procedure that enables specialists to look closely at problem areas, obtain biopsies, or remove foreign bodies.

**Computed Tomography (CT) and Magnetic Imaging (MRI)**
CT and MRI technology help specialists get a clearer view of organs, soft tissue and bone. CT technology is available at each of our hospitals. Our Campbell and Redwood City hospitals partner onsite with AnimalScan to provide MRI services.
